(54) **CONNECTOR FOR CARD**

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a connector for card capable of certainly holding the card insertion sensing condition even if vibration or a shock is applied externally.

SOLUTION: When a card 1 is inserted to the specified position in a connector body 10, a conductive plate 50 separates from a card sensing terminal 41 for a specified distance with abutting to the card 1, and thereby two card sensing terminals 40 and 41 are disengaged from the electrically continued condition, and even if vibration or a shock is applied to the conductive plate 50 externally, the plate 50 will never touch the other card sensing terminal 41, and is possible to maintain the card insertion sensing condition certainly.
